This Instruction Book Contains Information For Several Models. Read And Keep This Book For Future Reference. This Book Contains Important Information On:

SAFETY, ASSEMBLY, OPERATION AND MAINTENANCE.

PRODUCT INFORMATION
The owner must be certain that all the product information is included with this unit. This information includes the INSTRUCTION BOOKS, the REPLACEMENT PARTS and the WARRANTIES. This information must be included to make sure state laws and other laws are followed.

Model
309007x8B

Record The Following Information About Your Unit. This Information Is Necessary When Ordering Parts Or In Case Of Loss Or Theft.

WHERE PURCHASED: ________________________________.
DATE PURCHASED: Month ________ Day ________ Year ________.
MODEL NO.: __________________ DATE OF MANUFACTURE: ________.
MURRAY, INC. Two Year Limited Warranty

Murray, Inc. warrants to the original purchaser that this unit shall be free from defects in material and workmanship under normal use and service for a period of Two (2) Years from the date of purchase; however, this warranty does not cover engines, transmissions, batteries and Normal Wear Parts (except as noted below) or transaxles as the companies that manufacture these items furnish their own warranties and provide service through their authorized field service facilities. For additional information, see the warranties covering these particular parts. If you are uncertain whether your unit contains or is equipped with one or more of these parts, consult your dealer prior to purchase. Subject to the terms and conditions noted in this Limited Warranty, we shall, at our option, repair or replace at no cost to the original purchaser any part covered by this Limited Warranty during the applicable warranty period.

In the event the battery proves defective within ninety (90) days from the date of purchase, we will replace it without charge. If the battery proves defective after (90) days but within one hundred twenty (120) days from the date of purchase, we will replace it for a charge of one half (1/2) of the retail price of the battery in effect at the time of return.

To make a claim under this Murray, Inc. Two (2) Year Limited Warranty, return the unit (or if authorized in advance, the defective part) along with your proof of purchase to an Authorized Service Center near you. To locate the nearest Authorized Service Center, call the Central Parts Distributor for your area shown in the list provided with your unit or check the Yellow Page listings in your local telephone directory. If you return the entire unit, we will repair the unit. If we authorize the return of the defective part only, we will either replace or repair the part. In the case of a defect in a transmission or differential (as distinguished from a transaxle), the entire transmission or differential must be returned since they do not include user serviceable parts. Normal Wear Parts are defined as belts, blades, blade adapters, pneumatic tires, headlights and seat covers. These parts are warranted to be free from defects in material and workmanship as delivered with the product. Any claim for repair or replacement of Normal Wear Parts must be made within thirty (30) days of the date of purchase. No claims involving damage caused from material use, abuse or misuse will be honored.

This Murray, Inc. Two (2) Year Limited Warranty is your exclusive remedy; however, this warranty is void or does not apply to any unit that has been tampered with, altered, misused, abused or used for rental or other commercial and/or professional (non-homeowner) uses. Your warranty does not cover minor mechanical adjustments which are not due to any defect in material or workmanship. For assistance in making such adjustments, consult your Instruction Book.

This Murray, Inc. Two (2) Year Limited Warranty gives you specific legal rights, and you may also have other rights which vary from state to state. This Limited Warranty is given in lieu of all other expressed and implied warranties including the implied warranty of merchantability and warranty of fitness for a particular purpose. If you need additional information on this written warranty or assistance in obtaining service, write or call: MURRAY, INC., Outdoor Power Equipment, Customer Service Department, P.O. Box 268, Brentwood, Tennessee 37027. (1–800–224–8940)
This instruction book is for several different models. The instructions are written for a person with some mechanical ability. Like most service books, not all the steps are described. Steps on how to loosen or tighten fasteners are steps anyone can follow with some mechanical ability. Read and follow these instructions before you use the unit.

Know your product: If you understand the unit and how the unit operates, you will get the best performance. As you read this manual, compare the illustrations to the unit. Learn the location and the function of the controls. To help prevent an accident, follow the operating instructions and the safety rules. Keep this manual for future reference.

IMPORTANT: Many units are not assembled and are sold in cartons. It is the responsibility of the owner to make sure the assembly instructions in this manual are exactly followed. Other units are purchased in an assembled condition. On assembled units, it is the responsibility of the owner to make sure the unit is correctly assembled. The owner must carefully check the unit according to the instructions in this manual before it is first used.

Engine Exhaust, some of its constituents, and certain vehicle components contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

Battery posts, terminals and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. WASH HANDS AFTER HANDLING.

RESPONSIBILITY OF THE OWNER

The responsibility of the owner is to follow the instructions below.

1. Carefully read and follow the rules for safe operation.
2. Follow all the assembly instructions.
3. Inspect the unit.
4. Make sure that the operator of the unit knows how to correctly use all standard and accessory equipment.
5. Operate the unit only with guards, shields, and other safety items in place and working correctly.
6. Correctly adjust the unit.
7. Service the unit only with authorized or approved replacement parts.
8. Complete all maintenance on the unit.

SAFETY RULES

Safe Operation Practices for Ride-on Mowers

WARNING: This cutting machine is capable of amputating hands and feet and throwing objects. Failure to observe the following safety instructions could result in serious injury or death.

I. General operation
1. Read, understand and follow all instructions in the Instruction Book, on the machine, the engine and with any attachments before starting.
2. Only allow responsible adults, who are familiar with the instructions, to operate the machine.
3. Clear the area of objects such as rocks, toys, wire, etc., which could be picked up and thrown by the blade.
4. Be sure the area is clear of other people before mowing. Stop the machine if anyone enters the area.
5. Never carry passengers.
6. Turn off power to the blades or any attachments before backing up. Do not mow in reverse unless absolutely necessary. Always look down and behind before and while backing.
7. Be aware of the mower discharge direction and do not point it at anyone. Do not operate the mower without either the entire grass bagger or the mower guard in place.
8. Slow down before turning.
9. Never leave a machine unattended with the engine running. Always turn off the blade(s), set the parking brake, stop the engine and remove the key before dismounting.
10. Turn off power to attachment(s) when transporting or not in use. Turn off the blade(s) when not mowing.
11. Stop the engine before removing the grass bagger or unclogging the chute.
12. Mow only in daylight or good artificial light.
13. Do not operate the machine while under the influence of alcohol or drugs or when very tired.
14. Watch for traffic when operating near or crossing roadways.
15. Use extra caution when loading or unloading the machine into a trailer or truck.
16. Always wear goggles, safety glasses, or an eye shield when you operate the unit to protect your eyes from foreign objects that can be thrown from the unit. Always wear eye protection when you make an adjustment or repair to the machine.
17. Use care when pulling loads or using heavy equipment.
   a. Use only approved drawbar hitch points.
   b. Limit loads to those you can safely control.
c. Do not turn sharply. Use care when backing.
d. Use counterweights or wheel weights when suggested in the Instruction Book.

18. Do not operate this machine if you are taking drugs or other medication which can cause drowsiness or affect your ability to operate this machine.
19. Do not use this machine if you are mentally or physically unable to operate this machine safely.
20. Data indicates that operators, age 60 years and above, are involved in a large percentage of riding mower related injuries. These operators should evaluate their ability to operate a riding mower safely enough to protect themselves and others from serious injury.

II. Slope operation
Slopes and rough terrain are major factors related to loss-of-control and tip-over accidents, which can result in severe injury or death. ALL slopes require extra caution. If you cannot back up the slope or if you feel uneasy on the slope, do not mow it. See the “Slope Guide” in the back of this book to check for safe operation.

DO
1. Mow up and down slopes, not across.
2. Remove obstacles such as rocks, limbs, etc...
3. Watch for holes, ruts or bumps. Uneven terrain could overturn the machine. Tall grass can hide obstacles.
4. Follow the manufacturer’s recommendations for wheel weights or counterweights to improve stability.
5. Use extra care with grass baggers or other attachments, they can change the stability of the machine.
6. Keep all movement on the slopes slow and gradual. Do not make sudden changes in speed or direction.
7. Avoid starting or stopping on a slope. If tires lose traction, turn off the blades and proceed slowly straight down the slope.

DO NOT
1. Do not turn on slopes unless absolutely necessary, then only turn slowly and gradually downhill, if possible.
2. Do not mow drop-offs, ditches or embankments. A wheel over the edge or an edge caving in could cause a sudden overturn and an injury or death.
3. Do not mow on wet grass. Reduced traction could cause sliding.
4. Do not try to stabilize the machine by putting your foot on the ground.
5. Do not use a grass bagger or other rear mounted accessories on steep slopes (greater than 10 degrees).

III. Children
Tragic accidents can occur if the operator is not alert to the presence of children. Children are often attracted to the machine and the mowing activity. NEVER assume that children will remain where you last saw them.
1. Keep children out of the mowing area and in the watchful care of another responsible adult.
2. Be alert and turn the engine off if children enter the area.
3. Before and when backing, look behind and down for small children.
4. Never carry children or any passengers, even with the blades off. They may fall off and be seriously injured or interfere with the safe operation of the machine.
5. Never allow children to operate the machine. Instruct children in the potential dangers of the machine.
6. Use extra care when approaching blind corners, shrubs, trees or other objects that may obscure vision.

IV. Service
1. Use extra care when handling gasoline and other fuels. Fuels are flammable and the vapors are explosive.
   a. Use only an approved container.
   b. Never remove the gas cap or add fuel with the engine running. Allow the engine to cool for several minutes before refueling. Do not smoke.
   c. Never refuel the machine indoors.
   d. Never store the machine with fuel in the tank or fuel container inside where there is an open flame, such as a water heater.
2. Never start or run the engine inside a closed area.
3. Keep all nuts and bolts, especially the blade attachment nuts tight. Frequently check the blade(s) for wear or damage such as cracks and nicks. A blade that is bent or damaged must be immediately replaced with an original equipment blade from an authorized service dealer. For safety, replace the blade every two years. Keep the equipment in good condition.
4. Never tamper with the safety devices. Check their proper operation regularly.
5. To reduce fire hazards, keep the machine free of grass, leaves or other debris build-up. Clean up oil or fuel spills. Allow the machine to cool before storing.
6. Stop and inspect the equipment if you strike an object. Repair, if necessary, before restarting.
7. Never make adjustments or repairs with the engine running. The carburetor can be adjusted with the engine running. Do not change the engine governor settings or over-speed the engine.
8. Grass bagger components are subject to wear, damage and deterioration, which could expose moving parts or allow objects to be thrown. For storage, always make sure the grass bag is empty. Frequently check components and replace with manufacturer’s recommended parts when necessary.
9. Mower blade(s) are sharp and can cut. Wrap the blade(s) or wear gloves and use extra caution when servicing them or the blade housing area.
10. Check the brake operation frequently. Adjust and service as required.
11. Wait for all movement to stop before servicing any part of the unit.
Each person that operates power equipment must learn to use correct and safe mowing procedures. To help you learn, carefully read the following pages. Most of the time the operator was not correctly shown or did not read the instructions on the unit or in the Instruction Book before using the unit. Also, some operators do not have enough experience. The result is unsafe use, endangering the operator, bystanders and the equipment. Another result can be a poor appearance of the area mowed.

Read this book. Read the instructions on the unit. Operate the mower according to the Safe Mowing Guide. Follow all safety rules, cautions or warnings in this book and on the unit. Make sure anyone that uses the unit reads the instructions and is told how to safely operate the mower.

The mower will give you good service and durability, if operated in normal conditions. If the mower is not correctly serviced or is used where the terrain is rough or unsuitable, product performance and safety will be decreased.

Correct clothing is an important part of safe mowing. Safety glasses will protect the eyes from objects discharged by the mower. Safety shoes with steel plates can protect a foot from injury by the blade. For protection from objects discharged from the mower, wear clothing that will cover the arms and legs.

Before you start cutting the grass, practice using the mower in a large open and level area. Learn the location of the controls on the mower. Know the purpose of the controls and how they work. In an emergency, how fast you can stop the blade is important. Learn how to control the mower at all times.

Many engines are started by hand. When you use a pull start or rope start, place your feet apart and away from the blade(s). Hold the rope handle tight. Never wrap the rope around your arm or fingers for a “better grip”. To start the engine, follow the instructions on the mower, in this book and in the engine operating instructions.

For electric start engines, sit in the seat to start the engine. The battery can be dangerous. Follow the instructions on the battery, the acid container, and in this book when working with the battery. Even small batteries have enough voltage to cause an injury. Always be careful.

The mower is designed to be operated by one person. Never let another person ride with you on the unit or on any accessories. A passenger will make the unit harder to control, block the visibility or distract the operator and is dangerous to the operator, the passenger and the equipment. Without a passenger seat, the passenger can fall from the mower or contact dangerous parts. A mower is not a toy for showing off or for giving rides.

Never cut a wet lawn. Wet grass can cause an accident, affect mower performance and can cause problems with future lawn growth and appearance. Wet grass is slippery and can cause the mower to slip. Someone can get injured by touching the blade(s). Wet grass tends to clog the mower, causing poor discharge. Cut wet grass will collect on the lawn, retarding the growth of the grass. Also, getting the mower wet will cause parts to rust and decrease the life of the unit.

When you look over the lawn, remember obstacles that cannot be removed, like pipes, stumps or rocks. Keep away from these obstacles that can cause damage to the mower or injury to the operator or a person near the mower. Clear the area of rocks, toys, wire or other loose objects. These items can damage the mower or can be discharged by the mower blade.

Check the terrain of the area to be mowed. Mow in a pattern that will keep you away from dangerous areas. Check the distance you need to stop and the distance available to turn. Slopes and rough terrain must be mowed carefully and some areas must not be mowed at all. With riding mowers, mow up and down the hill. When you must mow rough terrain or on slopes, never change directions or change gears and stop in these areas only in an emergency. Before you ride up or down a slope, try to back straight up the slope. Do not ride up or down a slope that is too steep to back straight up. See the “Guide” in the back of this Instruction Book to check any slopes.

Before you start cutting, make sure the mower was completely assembled according to the Instruction Book. If the
mower was completely assembled at the store, you must still check the mower according to the assembly instructions. Make sure the mower is correctly assembled and that all fasteners are tight. Make sure the engine has the correct amount of oil. Check these items often during the life of the mower.

Your mower has a gasoline engine. Gasoline is a dangerous fuel. Keep gasoline only in an approved safety gasoline container. Do not keep large amounts of gasoline. When you add gasoline to the fuel tank, do not smoke. Store the gasoline container and the mower in an area that has good ventilation. Also, keep the gasoline away from any flames like the pilot light of a furnace or any other source of ignition. If the mower is to be stored for more than a few weeks, remove the gasoline from the fuel tank. When inside an enclosure, do not add gasoline to the fuel tank. Before you add gasoline, move the mower outside and add gasoline carefully. Before you start the engine, remove any gasoline from the outside of the fuel tank or from the mower. Warm gasoline will expand. Leave some space in the fuel tank for the gasoline to expand. Also, the fuel cap has a vent hole for fuel vapors. Always use the correct fuel cap. Failure to follow safety rules about gasoline will cause fires and explosions, injury to you and damage to the equipment and other property.

If you add gasoline to an engine that is running or hot, the result can be an explosion. Before you add gasoline, stop the engine and let the engine cool for several minutes. Remove dry grass and other debris from the mower. Keep the mower clean to improve the performance, help the engine and transmission run cooler, extend the life of moving parts, and decrease the danger of a fire.

Fires and explosions are not the only dangers when working around a mower. The engine, transmission, and the muffler will get hot in several minutes when the engine is running. Do not touch these parts of the mower. Stop the engine. Let the engine and transmission cool before servicing the mower. Remember, exhaust fumes are dangerous. Never operate the engine inside a building.

When you get a new mower, it can be a new experience for the family. Tell each person how a mower can be dangerous. Remember, a mower is not a toy. A mower is not to be used by children or anyone not old enough, strong enough or that does not have experience.

If the mower is not correctly assembled, not operated correctly, or not regularly serviced, the mower can be dangerous. The most important rule to follow is always use good judgement and common sense. Mow safely and carefully.

Your mower will easily cut thick grass. Fingers, feet and other parts can also be cut by the blade. Injuries occur when the operator does not think and reaches into the chute opening. Always operate the mower as if the blade is rotating. Do not service or make an adjustment, except to the carburetor, while the engine is running.

When you mow, remember that children are attracted to the mower. Always use caution when mowing around obstacles like trees or shrubs or when moving backward. Only mow in a forward direction if possible. Your visibility is decreased when you mow backward. Also, the blades are made to cut while the unit is moving forward. If you mow backward, the cutting performance decreases.

Before you leave the mower, stop the engine. Remove the key. Disengage and lower any attachment. Set the parking brake. Never mount or dismount from the seat while the engine is running. An accident can occur if you touch the brake, shift lever, throttle, clutch or blade control while the engine is running. Mount and dismount from the seat on the side of the unit that is marked ENTER–EXIT.

Make sure you are in good condition when you mow. When you mow for several hours your reflexes will decrease and your mind will not be as alert. Take a short break or an accident can occur. If the temperature is hot, use caution to prevent dehydration. If you are tired, angry or not completely alert, do not operate the mower. If you use alcohol, medication or drugs, do not use the mower or any type of power equipment.

Engine speed is a key to safe mowing and to a good looking lawn. The maximum speed of the engine was set at the factory. Do not change the setting of the engine governor.

Select the maximum engine and ground speed that is right for the terrain and the height of the grass. The blade cuts best when the engine is operating at maximum speed. The engine and transmission will also run cooler at maximum engine speed.
SAFE MOWING GUIDE

Also, the grass bagger will function better when the engine is operating at maximum speed. On slopes, decrease the ground speed and use care making sure the mower feels safe to operate.

If the weather conditions are bad, do not mow. If weather conditions become bad, stop cutting and finish later. It is dangerous to cut grass in the rain. Always find protection in an electrical storm. If the weather conditions are extra dry, protect your eyes with safety glasses from the dust and from the objects discharged by the mower. Also, a dust or a pollen mask can help.

Your mower is equipped with a number of safety devices which are important to the safety of the operator and bystanders and must never be changed or removed from the mower. If a safety device is lost, damaged or no longer functions, repair or replace the device before you operate the mower.

It is best to mow during the day. If you must mow at night, make sure there is enough light for safe operation.

Your mower will require regular maintenance and service. The maintenance schedule depends on the hours of use. Also, mowing conditions can change the schedule. Check the Instruction Book for more information. Correct maintenance will help the mower function safely.

Do not service the mower (except for the carburetor adjustment) while the engine is running. Before you service the unit, even with the engine stopped, always disconnect the wire from the spark plug to prevent the engine from starting.

If you hit a large object during operation, stop the engine. Remove the wire from the spark plug. Carefully inspect the mower for damage. Before you start the engine again, make the necessary repairs. If you feel new or excessive vibration, immediately stop the engine and check for the problem. Vibration can be a warning of a problem. Keep all nuts, bolts and screws tight.

The blade is the most dangerous part of the mower. Frequently check the blade and the blade mounting fasteners. Keep the fasteners tight. If the blade hits a solid object, stop the engine. Remove the wire from the spark plug. Check for a blade that is bent, cracked or for other damages. Before you start the engine, replace a damaged blade(s). For safety, replace the blade every two years.

A sharp blade decreases the workload on the engine and more evenly cuts grass. Frequently sharpen the blade for a better looking cut. Use the left side of the mower housing to trim near an object.

A grass bagger is a good accessory for your mower. For best performance and safety, make sure the grass bagger is approved for use with your mower. Follow the assembly and operation instructions included with the grass bagger.

Some grass baggers require a special blade for best performance. Before you attach, check, or empty the grass bagger, always stop the engine. Before each use of the grass bagger, check for cracks, wear or deterioration. Before you use the grass bagger, replace a damaged part with a replacement part approved by the factory.

For you to have a good green lawn, follow the mowing procedures below. Do not cut the grass too short. If you cut the grass too short you can cause the grass to become yellow or make the lawn look brown. Use a lower height of cut in cool months when the grass is thicker. Raise the height of cut in hot dry periods. If you cut the grass with a blade that is not sharp or at a slow engine speed you can damage the grass. Move the throttle control to the FAST position when mowing and using the grass bagger. Also, use a slower ground speed when using the grass bagger.

If you change the direction or pattern of cut slightly every time you mow will make the grass grow stronger and thicker. Do not add oil or gasoline to the mower while on the lawn. Spilled oil or gasoline can kill the grass. In high or thick grass, do not try to cut all the grass the first time. Raise the height of cut on the first cutting and lower the height for the next cutting. Another way is to cut only part of the width of the mower and decrease your ground speed (not the engine) to move more slowly so that the mower can discharge the grass as it moves forward.

Understand the controls and how they work. Learn the ground speed(s) of your mower. Check the stopping distance required at different travel speeds. Check the turning radius of the mower. The controls on your riding mower are different from an automobile. The throttle is operated by hand and holds the engine speed constant until it is changed. The location of the shift lever and the shift pattern is different from that of an automobile. Also, the brake and clutch systems are different. Remember the procedures to follow in an emergency. Remember, turning off the engine ignition switch will stop the blade and the drive mechanism. If the traction of the wheels is lost or does not feel safe, disengage all systems and stop the engine. Dismount from the mower. Push the unit to a safe place before you begin mowing again.

Your unit has an electrical system that includes an operator presence switch in the seat. The operator presence switch detects if the operator is sitting on the seat. The engine will stop if the operator leaves the seat when the blade engagement control is engaged. This operator presence switch is a safety device only. It must not regularly be used to stop the engine or the blade. There are other control systems on the mower for this purpose. Always keep the operator presence switch and other safety devices and controls in place and operating for your protection.

Remember, your mower is a tool that can be dangerous if it is not correctly used. Follow the instructions in this Instruction Book. Safe and careful use of the mower will give you many safe hours of problem free use.
BEFORE MOWING

- Be sure to dress correctly. Wear hard shoes, not sandals or tennis shoes.
- Examine the blade. A blade that is bent, cracked, or damaged must be replaced with a factory replacement blade.
- Fill the fuel tank outside. Clean off spilled fuel.
- Read and follow the Owner’s Manual, the instructions with the engine, and the instructions with any attachments. Owner’s Manual instructions are for your safety and the safety of others.
- Exhaust fumes are dangerous. Start the engine outside.
- Make sure all safety devices are in place and working correctly.
- Operation of the mower is only for a person that has experience.
- Wet grass can be dangerous. Let the grass dry.
- Clear children and others from the property and instruct them to stay away.
- Never cut the grass without good light.
- Pick up loose objects. Remove them from the mowing area.

WHILE MOWING

- Do not allow children and others in the mowing area. Watch for children and others.
- Watch for fixed objects and avoid them. They can damage the mower or cause injury.
- A hot engine, muffler, and transmission will cause a burn. Do not touch.
- Inclines and slopes must be carefully mowed. See the “Guide” in the back of this book to check a slope.
- Lack of daylight or good artificial light is cause to stop mowing.
- Examine the mower, the blade, and other parts for damage after hitting a foreign object or if the unit vibrates excessively.
- Do not make adjustments or repairs without stopping the engine. Disconnect the spark plug wire.
- On or near roads, watch out for traffic. Direct discharge away from roads.
- When mowing, avoid areas where traction is unsure. Look back before changing direction of travel. Look down and behind before and while backing.
- In heavy grass, raise the cutting height. Cut slower. Stop the engine to remove clogged grass from the mower.
- Never remove any safety related parts.
- Do not pour gasoline into a engine that is hot or running.

AFTER MOWING

- Always let the mower cool before storing in an enclosed area.
- Foreign material on the mower is dangerous. Clean off grass, leaves, grease and oil before storing.
- Tighten all loose nuts, bolts and screws before you use the unit.
- Empty and clean any grass catcher or other accessory.
- Remove the key or disconnect the spark plug wire to prevent unauthorized use.
- Make sure the mower is not kept near a source of ignition. Gas fumes can cause an explosion.
- Only original parts or factory approved substitutes can be used to service the mower.
- When storing the mower for an extended period, remove the fuel from the fuel tank.
- Instruct children to leave the mower alone. It is not a toy.
- Never keep gasoline near a source of ignition. Always use an approved container. Keep gasoline away from children.
- Lubricate according to the Instruction Book. See “Lubrication”.

WARNING: Look for this symbol to point out important safety precautions. It means: “Attention! Become Alert! Your Safety is Involved.”
INTERNATIONAL PICTORIALS

IMPORTANT: Some of the following pictorials are located on your unit or on literature supplied with the product. Before you operate the unit, learn and understand the purpose for each pictorial.

Safety Warning Pictorials
1 Warning
2 Shield Eyes. Explosive Gases Can Cause Blindness Or Injury.
3 No Sparks, Flames or Smoking.
4 Sulphuric Acid Can Cause Blindness Or Severe Burns
6 IMPORTANT: Read Owner’s Manual Before Operating This Machine.
7 WARNING: Thrown Objects. Keep Bystanders Away. Read User Instructions Before Operating This Machine.
8 WARNING: Do Not Use This Machine On Slopes Greater Than 15 Degrees.
9 DANGER: Keep People, Especially Children, Away From Unit.
10 DANGER: No Step.
11 DANGER: Keep Feet And Hands Away From Rotating Blade.
12 DANGER: Keep Hands Away From Rotating Blade.
13 DANGER: Disconnect Spark Plug Wire Before Servicing Unit.
14 WARNING: Hot Surface.
15 WARNING: Use Caution When Connecting Or Disconnecting Accessories.
16 WARNING: Crushed Fingers.

Control And Operating Pictorials

ASSEMBLY

Read and follow the assembly and adjustment instructions for your mower. All fasteners are in the parts bag. Do not discard any parts or material until the unit is assembled.

NOTE: In this instruction book, left and right describe the location of a part with the operator on the seat.

WARNING: Before doing any assembly or maintenance to the mower, remove the wire from the spark plug.

PARTS BAG – CONTENTS

The fasteners and other loose parts are shown below. The fasteners are shown full size. The quantity is shown in brackets ( ).

2x82 (2) Carriage Bolt
14x79 (2) Wing Nut
1001054 (2) Knob
17x47 (2) Washer
690604 (1) Cover, Terminal
(2) Ignition Key

LOOSE PARTS – CONTENTS

Seat
Steering Wheel And Post
Steering Colar
Literature Kit
Hardware Pack
Side Discharge Attachment
HOW TO INSTALL THE SEAT
Use the fasteners shown below to install the seat. The fasteners are shown at full size.

1. Carefully remove the plastic bag from the seat.
2. Raise the seat support and secure in the UP position with the seat support rod.
3. Align the holes in the seat to the holes in the seat support (Figure 1). Fasten the seat to the seat support with the fasteners as shown.
4. Check the operating position of the seat. If the seat needs to be adjusted, loosen the two wing bolts (A). Slide the seat forward or backward along the seat adjusting holes as shown. Tighten the wing bolts (A).

HOW TO ASSEMBLE THE STEERING WHEEL
Attach the steering wheel as follows:

1. Make sure the front wheels point forward.
2. Slide the tube into the console (Figure 2). Make sure the end of the tube fits over the steering bushing.

NOTE: Before attachment of the steering wheel, make sure that the front wheels point forward and are straight. The steering wheel will have either 3-spokes or 4-spokes. For proper alignment of the steering wheel, see Figure 2.

3. Slide the steering wheel and steering post into the tube and console. Push on the steering wheel. The steering post will lock onto the pinion gear. Pull on the steering wheel. Make sure that the steering post is locked in place.
**MAINTENANCE FREE BATTERY**

**IMPORTANT:** Before you attach the battery cables to the battery, check the battery date. The battery date tells if the battery must be charged.

1. Raise the seat support and secure in the UP position with the seat support rod.
2. Check the top and the side of the battery for the location of the battery date (Figure 3).
3. If the battery is put into service before the battery date, the battery cables can be attached without charging the battery. See “How To Install The Battery Cables”.
4. If the battery is put into service after the battery date, the battery must be charged. See “How To Charge The Maintenance Free Battery”.

**HOW TO CHARGE THE MAINTENANCE FREE BATTERY**

**WARNING:** When you charge the battery, do not smoke. Keep the battery away from any sparks. The fumes from the battery acid can cause an explosion.

1. To disconnect the battery retainer from the battery tray, push in on the lower end of the battery retainer.
2. Remove the battery from the right side of the unit.
3. Remove the protective cap from the battery terminal.
4. Use a 12 volt battery charger to charge the battery. Charge at a rate of 6 amperes for one hour. If you do not have a battery charger, have an authorized service center charge the battery.
5. Install the battery and secure with the battery retainer. Make sure the positive (+) terminal is on the right side.

**HOW TO INSTALL THE BATTERY CABLES**

**WARNING:** To prevent sparks, fasten the red cable to the positive (+) terminal before you connect the black cable.

Use the fasteners shown below to install the battery cables. The fasteners are shown at full size.

1. Remove the protective cap from the battery terminal.
2. Fasten the red cable and terminal cover to the positive (+) terminal with the fasteners as shown (Figure 3).
3. Fasten the black cable to the negative (−) terminal with the fasteners as shown.
IMPORTANT! BEFORE YOU START MOWING

- Check the engine oil.
- Fill the fuel tank with gasoline.
- Check the air pressure of the tires.
- Check the level of the mower housing.
- Make sure the battery cables are attached.
- Make sure the wire is attached to the spark plug.

WARNING: Before doing any assembly or maintenance to the mower, remove the wire from the spark plug.

NOTE: In this instruction book, left and right describe the location of a part with the operator on the seat.

HOW TO PREPARE THE ENGINE

NOTE: The engine was shipped from the factory filled with oil. Check the level of the oil. Add oil as needed.

NOTE: The operation of a new engine will sometimes result in a slight amount of smoke. This smoke is caused by paint or oil on or around the muffler. This is normal and only expected during initial operation.

A separate engine manual is also included with the unit. See this engine manual for the manufacturer’s instructions for the type of gasoline and oil to use. Before you use the unit, read the information on safety, operation, maintenance, and storage.

WARNING: Follow the engine manufacturer’s instructions for the type of gasoline and oil to use. Always use a safety gasoline container. Do not smoke when adding gasoline to the engine. When inside an enclosure, do not fill with gasoline. Before you add gasoline, stop the engine. Let the engine cool for several minutes.

IMPORTANT: This unit is equipped with an internal combustion engine and must not be used on or near any unimproved forest-covered, brush-covered or grass-covered land unless the engine’s exhaust system is equipped with a spark arrester meeting applicable local or state laws (if any). If a spark arrester is used, it must be maintained in effective working order by the operator.

In the State of California the above is required by law (Section 4442 of the California Public Resources Code). Other states may have similar laws. Federal laws apply on federal lands. See an Authorized Service Center for a spark arrester for the muffler.

In some areas, local law requires the use of a resistor spark plug to control the ignition signals. See an Authorized Service Center for a resistor spark plug for the engine.

NOTE: Actual sustained horsepower will likely be lower due to operating limitations and environmental factors.

CHECK THE TIRES

NOTE: The tires were over inflated for shipment. The correct air pressure is shown on the side of the tire.

Check the air pressure in the tires. Tires with too much air pressure will cause the unit to ride rough. Also, the wrong air pressure will keep the mower housing from cutting level. The correct air pressure is shown on the side of the tire.

CHECK THE LEVEL OF THE MOWER HOUSING

Make sure the level of cut is still correct. After you mow a short distance, look at the area that was cut. If the mower housing does not cut level, see the instructions on “How To Level The Mower Housing” in the Maintenance section of this instruction book.
LOCATION OF CONTROLS

BLADE ROTATION CONTROL: Use the blade rotation control to start and stop the rotation of the blade.

CLUTCH / BRAKE PEDAL: The pedal has two functions. The first function is a clutch. The second function is a brake. Use the brake pedal to quickly stop the forward or reverse motion of the unit.

IGNITION KEYSWITCH: Use the ignition key switch to start and stop the engine. When you start the engine and release the ignition key, the ignition key switch will automatically default to the recommended RUN–MOW position for normal mowing.

SHIFT LEVER: Use the shift lever to change the speed of the unit.

LIFT LEVER: Use the lift lever to change the height of cut.

PARKING BRAKE LEVER: Use the parking brake lever to engage the brake when you leave the unit.

THROTTLE CONTROL LEVER: Use the throttle control lever to increase or decrease the speed of the engine.
ATTACHMENTS

This unit can use many different attachments. See the attachment page in this book. This unit can pull attachments like a lawn sweeper, a lawn aerator, a hopper spreader, or a small trailer. This unit cannot use attachments that engage the ground like a plow, a disk harrow, or a cultivator.

For all pull-behind attachments or trailers, the maximum gross weight is 200 pounds. Gross weight is the weight of the attachment or trailer and any load that might be on or in it.

Do not operate on a slope that is greater than 10 degrees when using a pull-behind attachment or trailer. We have included a slope guide in this book to help you determine the slope on which you will be operating your unit. Never allow someone to stand or ride on or in an attachment or trailer.

ELECTRICAL SAFETY SYSTEM

The electrical system has two primary components, an Operator Presence System and a Select Reverse™ system.

Operator Presence System (Seat)

The seat has an Operator Presence System to shut off the engine when the operator leaves the seat. This system is not intended for regular use in stopping the engine or the blade(s). Before leaving the seat, move the blade rotation control to the DISENGAGE position, shift to neutral, set the parking brake and stop the engine.

Select Reverse™ System

The Select Reverse™ system will allow the mower blade(s) to continue to rotate when traveling in reverse. See “How To Operate The Ignition Key Switch” and “How To Start The Engine” for further details.

HOW TO OPERATE THE IGNITION KEY SWITCH

Use the ignition key switch to start and stop the engine. When you start the engine and release the ignition key, the ignition key switch will automatically default to the recommended RUN-MOW position for normal mowing.

START – Use this position to start the engine.

RUN-MOW – When you start the engine and release the ignition key, the ignition key switch will automatically default to the recommended RUN-MOW position for normal mowing. In the RUN-MOW position, the system will stop the engine and the blade(s) when the speed control pedal/shift lever is put in the reverse position.

SELECT REVERSE™ – The optional Select Reverse™ position will allow the mower blade(s) to continue to rotate when traveling in reverse. Always go back to the recommended RUN-MOW position for normal mowing when operation in Select Reverse™ is not absolutely necessary. NEVER use the Select Reverse™ option if children are on or near the property.

WARNING: Operators are strongly discouraged from using this option unless the operator decides such operation is absolutely necessary and that safe precautions are taken. Never use the Select Reverse™ option if children are on or near the property. Always look down and behind before and while backing. After using the Select Reverse™ position, move the ignition key back to the RUN-MOW position.

STOP – Use this position to stop the engine.
HOW TO USE
THE THROTTLE / CHOKE CONTROL

Use the throttle/choke control to choke the engine for cold starts and increase or decrease the speed of the engine (see Figure 6).

1. Move the throttle/choke control completely forward to the CHoke position to start a cold engine.

2. The FAST position is marked with a detent. For normal operation and when using a grass bagger, move the throttle control to the FAST position. For maximum charging of the battery and for a cooler running engine, operate the engine in the FAST position.

3. For transport and to tow pull behind attachments, move the throttle control to the SLOW position.

4. The engine governor is set at the factory for maximum performance. Do not adjust the governor to increase the speed of the engine.

HOW TO USE
THE BLADE ROTATION CONTROL

Use the blade rotation control to engage the blade (Figure 7).

1. Before you start the engine, make sure the blade rotation control is in the DISENGAGE position.

2. To rotate the blade, move the blade rotation control forward to lock the blade in the ENGAGE position.

   Note: If the engine stops when you engage the blade(s), the transmission is in reverse.

3. To stop the blade, move the blade rotation control to the DIS-ENGAGE position. Before you leave the operator’s position, make sure the blade has stopped rotating.

4. Before you ride the unit across a sidewalk or a road, move the blade rotation control to the DISENGAGE position.

5. Before operating in reverse, move the blade rotation control to the DISENGAGED position. If the blade rotation control is not in the DISENGAGED position, the engine will stop when the speed control pedal/shift lever is moved to REVERSE position.

WARNING: Always keep your hands and feet away from the blade, deflector opening, and the mower housing when the engine runs.
HOW TO USE THE SHIFT LEVER

To change the forward speed or the direction of the unit, follow the steps below.

CAUTION: Before you move the shift lever, completely push the clutch/brake pedal forward to stop the unit. If the unit is not stopped, the gearbox can be damaged.

1. Completely push the clutch/brake pedal forward to stop the unit. Keep your foot on the pedal (see Figure 8).

2. Move the throttle control lever to the SLOW position (see Figure 9).

3. To go forward, move the shift lever to a forward speed setting.

4. To go backward, move the shift lever to reverse. Always disengage blades and look down and behind before and while backing.

5. Slowly release the clutch/brake pedal. Do not keep your foot on the pedal.

6. Move the throttle control to the FAST position.

</table>

* See the Instruction Book for the Attachment.
HOW TO SET THE PARKING BRAKE

1. Completely push the **clutch/brake pedal** forward.
2. Lift the **parking brake lever** (Figure 11).
3. Remove your foot from the clutch/brake pedal and then release the **parking brake lever**. Make sure the parking brake will hold the unit.
4. To release the **parking brake**, completely push the **clutch/brake pedal** forward. The **parking brake** will automatically release.

**WARNING:** Before you leave the operator’s position, move the shift lever to the neutral (N) position. Set the parking brake. Move the blade rotation control to the **DISENGAGE** position. Stop the engine and remove the ignition key.

HOW TO CHANGE THE CUTTING HEIGHT

To change the cutting height, raise or lower the **lift lever** as follows.

1. Move the **lift lever** forward to lower the mower housing and back to raise the mower housing (Figure 12).
2. When you ride on a sidewalk or road, move the **lift lever** to the highest position and move the blade rotation control to the **DISENGAGE** position.

HOW TO STOP THE UNIT

1. Completely push the **clutch/brake pedal** forward to stop the unit. Keep your foot on the pedal.
2. Move the blade rotation control to the **DISENGAGE** position.
3. Move the shift lever to the **NEUTRAL** position.
4. Set the parking brake.

**WARNING:** Make sure the parking brake will hold the unit.

5. Move the throttle control to the **SLOW** position.
6. To stop the engine, turn the ignition key to the **STOP** position. Remove the key.

HOW TO TRANSPORT THE UNIT

To transport the unit, follow the steps below.

1. Move the blade rotation control to the **DISENGAGE** position.
2. Raise the lift lever to the highest position.
3. Move the throttle control to a position between **SLOW** and **FAST**.
4. To go faster, move the shift lever to a faster speed.
HOW TO INSTALL THE SIDE DISCHARGE ATTACHMENT

WARNING: To prevent the engine from starting, disconnect the wire from the spark plug. Make sure the blade rotation control is in the DISENGAGE position.

The mulcher cover lets you mulch the grass for a clean, fine cut. To discharge the grass out the side, install the side discharge attachment as follows.

1. Remove the fasteners that secure the mulcher cover (see Figure 13).
2. Lift the mulcher cover. Mount the side discharge attachment onto the same bolts that secured the mulcher cover.
3. Secure the side discharge attachment with the fasteners.
4. To mulch, remove the side discharge attachment and mount the mulcher cover to the mower housing with the fasteners.

![Diagram of mulcher cover and side discharge attachment with labels for Wingnut, Washer, Mulcher Cover, Side Discharge Attachment].
BEFORE STARTING THE ENGINE

CHECK THE OIL
NOTE: The engine was shipped from the factory filled with oil. Check the level of the oil. Add oil as needed. See the engine manufacturer’s instructions for the type of gasoline and oil to use.

1. Make sure the unit is level.
   NOTE: Do not check the level of the oil while the engine runs.

2. Check the oil. Follow the procedure in the engine manufacturer’s instructions.

3. If necessary, add oil until the oil reaches the FULL mark on the dipstick. The quantity of oil needed from ADD to FULL is shown on the dipstick. Do not add too much oil.

ADD GASOLINE
WARNING: Always use a safety gasoline container. Do not smoke when adding gasoline to the fuel tank. Do not add gasoline when you are inside an enclosure. Before you add gasoline, stop the engine and let the engine cool for several minutes.

Fill the fuel tank with regular unleaded gasoline. Do not use premium unleaded gasoline. Make sure the gasoline is fresh and clean. Leaded gasoline will increase deposits and shorten the life of the valves.

CAUTION: A mixture of alcohol (ethanol or methanol) and gasoline (called gasohol), will attract moisture and cause acid deposits during storage. While the unit is in storage, the acids in the fuel can damage the fuel system.

To prevent engine problems with the fuel system, empty the fuel system before storage of 30 days or longer as follows.

1. Drain the fuel tank.

2. Start the engine. Let the engine run until the fuel lines and the carburetor are empty.

3. After storage, make sure you use fresh fuel. See the storage instructions for additional information.

4. Never use engine cleaner or carburetor cleaner in the fuel tank or permanent damage can occur.

CARBURETOR
The factory settings for the carburetor are for most conditions. If the engine is operated under the following conditions, you can adjust the carburetor mixture. To adjust the carburetor, see the engine manufacturer’s instructions.

1. The engine has a loss of power or does not run smooth.

2. A change from summer to winter operation.

3. A 40 degree change in the operation temperature. The carburetor was adjusted at 80 degrees at the factory.

4. The engine is operated above 4,000 feet.

HOW TO START THE ENGINE

WARNING: The electrical system has two primary components, an operator presence system and a Select Reverse™ system. The operator presence system determines if the operator is sitting on the seat. This system will stop the engine when the operator leaves the seat. The Select Reverse™ system gives the operator the ability to temporarily mow in reverse if he decides such operation is absolutely necessary and safe operating precautions are taken. For your protection, always make sure these systems operate correctly.

NOTE: The engine will not start unless you depress the clutch/brake pedal or engage the parking brake and move the blade rotation control to the DISENGAGE position.

1. Make sure the spark plug wire is connected to the spark plug.

2. Push the clutch/brake pedal completely forward. Keep your foot on the pedal.

3. Move the shift lever to the neutral (N) position.

4. Make sure the blade rotation control is in the DISENGAGE position. If the blade rotation control is not in the DISENGAGE position, the engine will not start.

5. Move the throttle control completely forward to the CHOKE[N] or FAST position. Some models have a separate choke knob. Pull the choke knob to the full CHOKE position.

6. Turn the ignition key to the START position. Release the key when the engine starts. The ignition key switch will automatically default to the recommended RUN–MOW position for normal mowing. See "How To Operate The Ignition Key Switch" in the Operation Section.

NOTE: If the engine does not start after four or five tries, see the TROUBLE SHOOTING CHART.

7. Slowly move the throttle control to the SLOW position.

8. Let a cold engine run for several minutes. Begin work when the engine is warm. To start a hot engine, move the throttle control to a position between FAST and SLOW.
OPERATION

HOW TO OPERATE WITH THE MOWER HOUSING

WARNING: The deflector is a safety device. Do not remove the deflector. The deflector forces the discharged material toward the ground. Always keep the deflector in the down position. If the deflector is damaged, replace the deflector with an original equipment part from an authorized service center.

IMPORTANT: When you operate with the mower housing, always operate with the throttle control in the FAST position.

1. Start the engine.
2. Move the lift lever to a height of cut position. In high or thick grass, cut the grass in the highest position first and then lower the mower housing to a lower position.

CAUTION: Do not operate with the mower housing in the LEVEL ADJUSTMENT position. If you operate in the LEVEL ADJUSTMENT position, the mower housing and blades can be damaged.

3. Move the throttle control to the SLOW position.
4. Slowly move the blade rotation control to the ENGAGE position.
5. Push the clutch/brake pedal completely forward.
6. Move the shift lever to one of the speed settings.

NOTE: When you mow in heavy grass or mow with a bagger, put the shift lever in the slowest speed.

7. Slowly release the clutch/brake pedal.
8. Move the throttle control to the FAST position. If you need to go faster or slower, stop the unit and move the shift lever to another speed setting.
9. Make sure the level of cut is still correct. After you mow a short distance, look at the area that was cut. If the mower housing does not cut level, see the instructions on “How To Level The Mower Housing” in the Maintenance section.

WARNING: For better control of the unit, always select a safe speed.

HOW TO OPERATE THE UNIT ON HILLS

WARNING: Do not ride up or down slopes that are too steep to back straight up. Never ride the unit across a slope. See the “Slope Guide” in the back of this book for information on how to check slopes.

1. Before you ride up or down a hill, move the shift lever to the slowest speed.
2. Do not stop or change speed settings on a hill. If you must stop, quickly push the clutch/brake pedal forward and set the parking brake.

3. To start again, make sure the shift lever is in the slowest speed. Move the throttle control to the SLOW position. Slowly release the pedal.
4. If you must stop or start on a hill, always have enough space for the unit to roll when you release the brake and engage the clutch.
5. Be very careful when you change directions on a hill. When on a slope or in a turn on a hill, move the throttle control to the SLOW position to help prevent an accident.
OPERATING TIPS

1. Check the blade rotation control for correct adjustment. For the blade(s) to disengage correctly, the adjustment must be correct.
2. Before you use the unit, check the oil in the engine and add oil if necessary.
3. If the engine will not start, first make sure the wire is attached to the spark plug.
4. Make sure all the belts are inside all the belt guides. See the instructions on how to remove and install the motion drive and mower drive belts.
5. Before you make an inspection, adjustment (except for the carburetor) or repair, make sure the wire from the spark plug is disconnected.
6. For longer life of the battery on electric start models, charge the battery every three months.
7. Use the shift lever to change the ground speed, not the throttle control.
8. Belt noise can occur when the blade or clutch is engaged. This noise is normal and does not affect the operation of the unit.

MOWING AND BAGGING TIPS

1. For a lawn to look better, check the cutting level of the mower housing. See “How To Level The Mower Housing” in the Maintenance section.
2. For the mower housing to cut level, make sure the tires have the correct amount of air pressure and use slow ground speeds when turning.
3. Every time you use the unit, check the blade. If the blade is bent or damaged, immediately replace the blade. Also, make sure the nut for the blade is tight.
4. Keep the blade(s) sharpened. Worn blades will cause the ends of the grass to turn brown.
5. Do not cut or bag grass that is wet. Wet grass will not discharge correctly. Let the grass dry before cutting.
6. Use the left side of the mower housing to trim near an object.
7. Discharge the cut grass onto the mowed area. The result is a more even discharge of cut grass.
8. When you mow large areas, start by turning to the right so that the cut grass will discharge away from shrubs, fences, driveways, etc. After one or two rounds, mow in the opposite direction making left turns until finished (Figure 14).
9. Use a mowing pattern that eliminates reverse travel as much as possible.
10. If the grass is very high, cut two times to decrease the load on the engine. First cut with the mower housing in the highest position and then lower the mower housing for the second cut.
11. For better engine performance and an even discharge of the cut grass, always operate the engine with the throttle in FAST position.
12. When you use a bagger, operate the engine with the throttle in FAST position and the shift lever in first or second gear.
13. For better cutting performance and a quality cut, mow with the shift lever in one of the slower speeds.
14. After each use, clean the bottom and top of the mower housing for better performance. Also, a clean mower housing will help prevent a fire.
# MAINTENANCE

## MAINTENANCE CHART

## GENERAL RECOMMENDATIONS

1. The owner’s responsibility is to maintain this product. This will extend the life of the product and is also necessary to maintain warranty coverage.
2. Check the spark plug, drive brake, lubricate the unit, and clean the air filter once a year.
3. Check the fasteners. Make sure all fasteners are tight.
4. Follow the Maintenance section to keep the unit in good operating condition.

**WARNING:** Before you make an inspection, adjustment, or repair to the unit, disconnect the wire to the spark plug. Remove the wire from the spark plug to prevent the engine from starting by accident.

**NOTE:** Torque is measured in foot pounds (metric Nm). This measurement describes how tight a nut or bolt must be. The torque is measured with a torque wrench.

## HOW TO CHECK THE MUFFLER

Check the muffler every 50 hours. Make sure the muffler is correctly mounted and is not loose. If the muffler is worn or burnt, replace with a new muffler. A worn muffler is a fire hazard and can also damage the engine.

If you mount a spark arrester to the muffler, also check the spark arrester when you check the muffler. If the spark arrester is worn or damaged, replace it with a new spark arrester. See your nearest authorized service center for a spark arrester.
MAINTENANCE

INSPECT BLADE

WARNING: Before you inspect or remove the blade, disconnect the wire to the spark plug. If the blade hits an object, stop the engine. Check the unit for damage. The blade has sharp edges. When you hold the blade, use gloves or cloth material to protect your hands.

If you keep the blade sharp and inspect the blade for damage, the blade will cut better and be more safe to operate. Frequently check the blade for excessive wear, cracks, or other damage. Frequently check the nut that holds the blade. Keep the nut tight. If the blade hits an object, stop the engine. Disconnect the wire to the spark plug. See if the blade is bent or damaged. Check the blade adapter for damage. Before you operate the unit, replace damaged parts with original equipment parts. See the authorized service center in your area. Every three years, have an authorized service person inspect the blade or replace the old blade with an original equipment part.

HOW TO REMOVE AND INSTALL THE BLADE

1. Remove the mower housing. See the instructions on “How To Remove The Mower Housing”.
2. Use a piece of wood to keep the blade from rotating.
3. Remove the nut that holds the blade (Figure 15).
4. Check the blade and the blade adapter according to the instructions for “Inspect Blade”. Replace a badly worn or damaged blade with an original equipment blade. See an authorized service center in your area.
5. Clean the top and bottom of the mower housing. Remove all the grass and debris.
6. Mount the blade and blade adapter on the mandrel (Figure 15).
7. Mount the blade so that the hi-lift edges are up. If the blade is upside down, the blade will not cut correctly and can cause an accident.
8. Fasten the blade with the original washers and nut. Make sure the outside rim of the Belleville washer is against the blade (Figure 16).

WARNING: Always keep the nut tight that holds the blade. A loose nut or blade can cause an accident.

9. Tighten the nut that holds the blade to a torque of 35 foot pounds (47.5 N·m).
10. Install the mower housing. See “How To Install The Mower Housing”.

HOW TO SHARPEN THE BLADE

WARNING: Vibration can be caused if the blade is not correctly balanced or if the blade is damaged. A blade that is damaged with cracks can break and cause an accident.

Keep a sharp edge on the blade. A blade that is not sharp will cause the tips of the grass to become brown.

1. Sharpen the blade two times a year or every 25 hours.
2. Remove the blade according to the instructions in “How To Remove And Install The Blade”.
3. Clean the blade with a brush, soap and water. Check the blade. Look for cracks, nicks, or other damage. Replace a badly worn or damaged blade with an original equipment blade. See an authorized service center in your area.
4. Sharpen the blade with a file (Figure 17). Make sure you keep the original bevel angle.
5. Make sure the blade is balanced. Use a screwdriver and hold the blade parallel to the ground (Figure 17). A blade that is balanced will stay parallel to the ground. The blade is not balanced, the heavy end will rotate toward the ground. Sharpen the heavy end until the blade is balanced.
6. A new blade will cut better than a badly worn blade. Every three years, have an authorized service person inspect the blade or replace the old blade with an original equipment blade.
7. Assemble the blade according to the instructions “How To Remove And Install The Blade”.

WARNING: Always keep the nut tight that holds the blade. A loose nut or blade can cause an accident.
MAINTENANCE

HOW TO CHECK THE BLADE ROTATION CONTROL

**WARNING:** To prevent an injury, the blade rotation control must operate correctly.

In normal usage, the blade rotation control will not require an adjustment. However, if the cutting performance decreases or the quality of cut is poor, make the following changes.

1. When you mow, make sure the throttle control is in the FAST position.
2. Move the blade rotation control to the DISENGAGE position (Figure 18).
3. Stop the engine. Disconnect the wire from the spark plug.

4. Check the blade(s). Keep a sharp edge on the blade(s). A blade that is not sharp will cause the tips of the grass to become brown.
5. If the quality of cut has not improved, replace the mower drive belt. See “How To Replace The Mower Drive Belt”. If replacing the belt does not correct the problem, take the unit to a Sears or other qualified service center.
6. Move the blade rotation control to the DISENGAGE position. Stop the engine. Disconnect the wire from the spark plug.
7. Check the operation of the blade brake. Rotate the pulley with your hand. Make sure the brake pad is pressed tightly against the pulley (Figure 19).

**WARNING:** If the brake pad does not press tightly against the pulley, take the unit to a Sears or other qualified service center.
8. Move the blade rotation control to the ENGAGE position.
9. Check the pad for the blade brake. If the pad is excessively worn or damaged, replace the brake pad assemblies. Correct replacement parts and assistance are available from a Sears service center.
10. Attach the wire to the spark plug. Mow for a short distance and again check the operation of the blade rotation control.
11. When you move the blade rotation control to the DISENGAGE position, all movement will stop within five seconds. If there is movement of the belt or the blades continue to rotate, engage and disengage the blade rotation control five times to remove any excess rubber from a new mower drive belt. If you need assistance, take the unit to a Sears or other qualified service center.
HOW TO CHECK AND ADJUST THE DRIVE BRAKE

Completely push the clutch/brake pedal forward. Set the parking brake. Move the shift lever to the neutral (N) position. Push the unit. If the rear wheels rotate, adjust or replace the brake pads. Adjust the drive brake as follows.

1. The location of the drive brake is on the left side of the gearbox (Figure 20).
2. Make sure the parking brake is set and the shift lever is in neutral (N). Turn the hex nut in a clockwise direction until the rear wheels do not turn when the unit is pushed forward.
3. Release the parking brake and push the unit. If the unit does not roll, turn the hex nut in a counterclockwise direction until the unit rolls.
4. Set the parking brake. Push the unit. If the rear wheels do not turn, the drive brake is correctly adjusted. Release the parking brake.

WARNING: If you cannot correctly adjust the drive brake, replace the brake pads. Correct replacement parts and assistance are available from an authorized service center.

HOW TO CHECK AND ADJUST THE CLUTCH

If the motion drive belt is loose, the clutch will slip when; (1) going up a hill, (2) pulling a heavy load, or (3) the unit will not move forward. Adjust the clutch as follows.

WARNING: Before you make an inspection, adjustment, or repair to the unit, disconnect the wire to the spark plug. Remove the wire from the spark plug to prevent the engine from starting by accident.

1. Check the routing of the motion drive belt. Make sure the belt is installed correctly and is inside all the belt guides.
2. Remove the cotter pin, washer, and brake spring from the adjustable nut (Figure 21).
3. Disconnect the adjustable nut from the brake lever assembly.
4. Align the hole in the brake lever with the rear of the slot in the frame.
5. Push the clutch rod toward the rear. Turn the adjustable nut until the nut will fit through the hole in the brake lever.
6. Assemble the adjustable nut to the brake lever and to the brake spring. Fasten with the washer and cotter pin.
7. If the belt still slips after the clutch has been adjusted, then the motion drive belt is worn or damaged and must be replaced. See “How To Replace The Motion Drive Belt”.

Figure 20

Figure 21
MAINTENANCE

HOW TO ADJUST THE SHIFT LEVER

If the NEUTRAL position on the shift lever does not match neutral on the gearbox, adjust the shift lever as follows.

1. Stop the engine.
2. Disconnect the adjuster nut from the shifter yoke (Figure 22).
3. Make sure the shift lever is in the NEUTRAL position.
4. Push the unit forward. Make sure the gearbox is in neutral.
5. To align the adjuster nut with the hole in the shifter yoke, turn the adjuster nut.
6. Connect the adjuster nut to the shifter yoke.
7. Make sure the NEUTRAL position on the shift lever matches neutral on the gearbox.

MAINTENANCE FREE BATTERY

HOW TO REMOVE THE BATTERY

To charge or clean the battery, remove the battery from the unit as follows.

WARNING: To prevent sparks, disconnect the black battery cable from the negative (−) terminal before you disconnect the red cable.

WARNING: The battery contains sulfuric acid which is harmful to the skin, eyes and clothing. If the acid gets on the body or clothing, wash with water.

1. Disconnect the black cable from the negative (−) terminal (Figure 23).
2. Disconnect the red cable from the positive (+) terminal.
3. To disconnect the battery retainer from the battery tray, push in on the lower end of the battery retainer.
4. Remove the battery from the right side of the unit.

HOW TO CLEAN THE BATTERY

1. Remove the battery.
2. Wash the battery with a solution of one gallon of water and four tablespoons of baking soda (sodium bicarbonate). Make sure the solution does not get into the battery cells.
3. Clean the terminals and the ends of the cables with a wire brush.
4. Install the battery.
5. To prevent corrosion, apply grease to the battery terminals.

HOW TO CHARGE THE BATTERY

WARNING: When you charge the battery, do not smoke. Keep the battery away from any sparks. The fumes from the battery acid can cause an explosion.

1. Before you charge the battery, remove the battery.
2. To charge the battery, use a 12 volt battery charger. Charge at a rate of 6 amperes for 1 hour.
3. Install the battery.

WARNING: To prevent sparks, fasten the red cable to the positive (+) terminal before you connect the black cable.

4. Fasten the red cable and terminal cover to the positive (+) terminal with the fasteners as shown.
5. Fasten the black cable to the negative (−) terminal with the fasteners as shown.
WHERE TO LUBRICATE

- Apply grease with a brush to the areas shown.
- Lubricate the areas shown with engine oil.

NOTE: Apply grease to the steering gear assembly.
CAUTION: If the unit is operated in dry areas that have sand, use a dry graphite spray to lubricate the unit.

HOW TO CHECK THE FUEL FILTER

NOTE: Before you replace the fuel filter or the fuel line, the fuel tank must be empty.

If the fuel filter is dirty, the engine will run rough and have less performance. Remove the old filter (Figure 25). Replace the old filter with a new filter. Use an original equipment part. See an authorized service dealer in your area.

CHECK THE TIRES

Check the air pressure in the tires. Tires with too much air pressure will cause the unit to ride rough. Also, the wrong air pressure will keep the mower housing from cutting level. The correct air pressure is shown on the side of the tire.
HOW TO LEVEL THE MOWER HOUSING

If the mower housing is level, the blade will cut easier and the lawn will look better.

**WARNING:** Before you make an inspection, adjustment, or repair to the unit, disconnect the wire to the spark plug. Remove the spark plug wire to prevent the engine from starting by accident.

1. Make sure the unit is on a hard flat surface.

2. Check the air pressure in the tires. If the air pressure is incorrect, the mower housing will not cut level. The correct air pressure is shown on the side of the tire.

3. Make sure the blade rotation control is in the DISENGAGE position.

4. Open the cover (see Figure 26).

5. Move the lift lever to the LEVEL ADJUSTMENT position (see Figure 26).

6. Loosen the front and rear adjuster knobs (see Figure 26 and Figure 27). Make sure both sides of the mower housing are setting on a flat surface.

7. Make sure that the adjuster plate is loose and can easily move up or down (see Figure 27).

8. Tighten the front and rear adjuster knobs. Make sure the adjuster knobs are tight. If necessary, use a wrench to tighten the adjuster knobs. Tighten to a torque of 10 foot pounds (13.5 N·m).

9. Raise the lift lever from the LEVEL ADJUSTMENT position to a CUTTING HEIGHT position (Figure 28).

10. Close the cover.

11. Attach the spark plug wire to the spark plug.

12. Mow for a short distance. If the height of cut is not level, repeat the above steps.

**CAUTION:** Do not operate with the mower housing in the LEVEL ADJUSTMENT position. If you operate in the LEVEL ADJUSTMENT position, the mower housing and blades can be damaged.
HOW TO REMOVE THE MOWER HOUSING

1. Move the blade rotation control to the DISENGAGE position.
2. Move the lift lever to the level adjustment position (Figure 29).

   NOTE: Make sure the lift lever is locked in the LEVEL ADJUSTMENT position.

3. Remove the hair pins and the washers from the rear suspension arms (Figure 30). See illustrations “C” and “D”.
4. Remove the hair pins and washers from the suspension links. See illustrations “A” and “B”.
5. Disconnect the extension spring from the blade control rod. See illustration “E”.
6. Disconnect the front hanger from the frame support. See illustration “F”.
7. Remove the mower drive belt from the stack pulley. See illustration “G”.
8. Pull the mower housing away from the right side of the unit.
9. To operate without the mower housing, move the lift lever to the TOP position.

HOW TO INSTALL THE MOWER HOUSING

1. Push the mower housing under the right side of the unit.
2. Put the mower drive belt around the stack pulley. Make sure the "V" side of the mower drive belt is against the stack pulley. Also, make sure the mower drive belt is not twisted.
3. Attach the front hanger to the frame support with the hanger rod. Fasten with the fasteners as shown. See illustration “F”.
4. Make sure the mower drive belt is between the stack pulley and the two belt guides. See illustration “G”.
5. Attach the suspension links to the lifter assembly. Fasten with the washers and hair pins. See illustrations “A” and “B”.
6. Attach the rear suspension arms to the suspension brackets. Fasten with the washers and hair pins. See illustrations “C” and “D”.
7. Attach the extension spring to the blade control rod. See illustration “E”.
8. Move the blade rotation control to the ENGAGE position. Make sure the mower drive belt is inside all the belt guides and is also below the spacer tube.
9. Make sure the mower housing is level. See the instructions on “How To Level The Mower Housing”.
10. Check the operation of the blade rotation control. See the instructions on “How To Adjust The Blade Rotation Control”.

Figure 29

Figure 30
HOW TO REPLACE THE MOTION DRIVE BELT

REMOVAL
1. Remove the mower housing. See the instructions on “How To Remove The Mower Housing”.
2. Completely push the pedal forward and engage the parking brake.
3. Remove the idler pulley (Figure 31).
4. Loosen the belt guides next to the drive pulley.
5. Remove the motion drive belt from the drive pulley.
6. Remove the motion drive belt from the stack pulley. A correct replacement part or assistance is available from an Authorized Service Center in your area.

INSTALLATION
1. Slide the motion drive belt between the stack pulley and the belt guides (Figure 31). Install the motion drive belt on the top pulley of the stack pulley. Make sure the “V” side of the belt is against the pulley.
2. Install the end of the motion drive belt around the drive pulley.
3. Make sure the motion drive belt is inside of the belt guides next to the drive pulley. Tighten the belt guides.
4. Put the belt around the idler pulley. Assemble the idler pulley. Fasten the idler pulley with the hex nut. Make sure the “V” side of the belt is against the idler pulley. Also, make sure the belt is not twisted.
5. Check the routing of the motion drive belt. Make sure the motion drive belt is installed correctly on the idler pulley. Make sure the motion drive belt is inside all the belt guides.
6. Before you use the unit, check the adjustment of the clutch. See the instructions “How To Check And Adjust The Clutch”.
7. Install the mower housing. See the instructions “How To Install The Mower Housing”.
HOW TO REPLACE THE MOWER DRIVE BELT

1. Remove the mower housing. See the instructions on “How To Remove The Mower Housing”.

2. Pull the belt retainer away from the idler pulley and remove the mower drive belt (Figure 32).

3. Pull the brake pad away from the jackshaft pulley and remove the mower drive belt.

   NOTE: Replace the mower drive belt with an original equipment belt from an authorized service center.

4. Install the new mower drive belt. Pull the brake pad away from the jackshaft pulley. Put the mower drive belt around the jackshaft pulley.

5. Pull the belt retainer away from the idler pulley. Put the mower drive belt around the idler pulley.

6. Make sure the “V” side of the mower drive belt is against the jackshaft pulley and the idler pulley.

7. Install the mower housing. See the instructions on “How To Install The Mower Housing”.

8. Before you mow, check the blade rotation control. See the instructions on “How To Adjust The Blade Rotation Control”.

Figure 32
HOW TO INSTALL THE WHEELS

If the wheels must be removed for service, make sure they are installed as follows.

Front Wheel

1. Make sure the valve stem is to the outside of the tractor. Slide the front wheel on the spindle (See Figure 33).

2. Fasten the front wheel with washer and cotter pin. Bend the ends of the cotter pin apart to keep the front wheel on the spindle.

3. If your model has hub caps, install the hub caps. Make sure the washer hold the hub caps in place.

Rear Wheel

1. Install the washers and spacer onto the axle as shown in Figure 34.

2. Mount the square key in the key slot (See Figure 34).

3. Make sure the valve stem is to the outside of the tractor. Align the slot in the rear wheel with the square key. Slide the rear wheel on the axle.

4. Fasten the rear wheel with washer and e-ring.

5. If your model has hub caps, install the hub caps. Make sure the washer hold the hub caps in place.
MAINTENANCE

HOW TO REPLACE THE FUSE

If the fuse is blown, the engine will not start. The location of the fuse is next to the battery. Remove the fuse and replace with an automotive fuse (Figure 35).

![Automotive Fuse](Figure 35)

HOW TO CLEAN THE MOWER HOUSING

**WARNING:** Before you clean the mower housing, stop the engine and disconnect the wire to the spark plug.

Grass and other debris on top of the mower housing can keep the belt from working correctly. For safety and correct operation, frequently clean the top of the mower housing. Remove grass and debris from around the pulleys and other moving parts.

1. Move the lever for the blade rotation control to the ENGAGE position.
2. Clean the top of the mower housing.
3. Move the lever for the blade rotation control to the DISENGAGE position.
4. Again clean the top of the mower housing.
5. After you cut the grass, clean the bottom of the mower housing.

STORAGE (over 30 days)

At the end of each year, prepare the unit for storage as follows.

**THE ENGINE**

For storage information, see the engine manufacturer’s instructions.

**THE BATTERY**

1. Remove the battery.
2. Clean the battery terminals of any deposits.
3. Charge the battery. See the instructions on “How To Prepare And Charge The Battery”.
4. Store the battery in a cool, dry place.

**NOTE:** After a long time in storage, charge the battery.

**THE FUEL SYSTEM**

**WARNING:** Do not drain the gasoline inside a building or near a fire. Do not smoke because the fumes from the fuel can cause an explosion.

1. Start the engine.
2. Run the engine until the fuel tank and the carburetor are out of fuel and the engine stops.
3. After storage, make sure you use fresh fuel.

**CLEAN THE UNIT**

1. Clean the dirt and grass from the engine.
2. Clean the mower housing.

**LUBRICATE THE UNIT**

See the “Lubrication” instructions in this book.
TROUBLE SHOOTING CHART

PROBLEM: The engine will not start.
2. Electric–Start Models: Clean the battery terminals. Tighten the cables.
3. Drain the fuel tank. Clean the fuel line. Replace the fuel filter.
4. Remove the spark plug(s). Move the throttle to the SLOW position. Turn the ignition key to the ON position. Try to start the engine several times. Install the spark plug.
5. Replace the spark plug.
6. Adjust the carburetor.

PROBLEM: The engine will not turn over.
2. Electric–Start Models: Check the level of the acid in the battery. If needed, add water. Charge the battery.
3. Replace the fuse.
4. Check the wiring harness for damage or a loose connection. Repair the damaged wire.

PROBLEM: The engine is difficult to start.
1. Adjust the carburetor.
2. Replace the spark plug.
3. Replace the fuel filter.

PROBLEM: The engine does not run smooth or has a loss of power.
1. Check the oil.
2. Clean the air filter.
3. Clean the air screen.
4. Replace the spark plug.
5. The engine is working too hard. Use a lower gear.
6. Adjust the carburetor.
7. Replace the fuel filter.

PROBLEM: The engine does not run smooth at fast speed.
1. Replace the spark plug.
2. Adjust the throttle control.
3. Clean the air filter.
4. Replace the fuel filter.

PROBLEM: The engine stops when the blades are engaged.
1. Check the wiring harness for damage or a loose connection. Repair the damaged wire.
2. Transmission is in reverse. Before operating in reverse, move the blade rotation control to the DISENGAGED position.

PROBLEM: On slopes, the engine stops.
1. Mow up and down slopes. Never mow across a slope.

PROBLEM: The engine will not idle.
1. Replace the spark plug.
2. Clean the air filter.
3. Adjust the carburetor.
4. Adjust the throttle control.
5. Drain the fuel tank. Clean the fuel line. Replace the fuel filter.

PROBLEM: A hot engine causes a decrease in power.
1. Clean the air screen.
2. Check the oil.
3. Adjust the carburetor.
4. Replace the fuel filter.

PROBLEM: Excessive vibration.
1. Replace the blade.
2. Check for loose engine bolts.
3. Decrease the air pressure in the tires.
4. Adjust the carburetor.
5. Check for a damaged belt or damaged pulley. Replace the damaged parts.

PROBLEM: The grass does not discharge correctly.
1. Stop the engine. Clean the mower housing.
2. Raise the height of cut.
3. Replace or sharpen the blade(s).
4. Move the shift lever to a slower speed.
5. Move the throttle control to the FAST position.
6. Replace the spring for the blade idler.

PROBLEM: The mower housing does not cut level.
1. Check the air pressure in the tires.
2. Adjust the level of the mower housing.
3. Check the front axle. If the front axle does not freely pivot, loosen the axle bolt(s).

PROBLEM: The mower blades will not rotate.
1. Check the mower drive belt. Make sure the belt is installed correctly.
2. Replace the mower drive belt.

PROBLEM: The unit will not move when the clutch is engaged.
1. Check the motion drive belt. Make sure the belt is installed correctly.
2. Adjust the clutch.
3. Replace the motion drive belt.

PROBLEM: The unit moves slower or stops when the clutch is engaged.
1. Adjust the clutch.
2. Replace the motion drive belt.

PROBLEM: When the clutch/brake pedal is released, belt noise can be heard.
1. Temporary belt noise does not change the operation of the unit. If belt noise is continuous, check the routing of the belt. Make sure the belt is inside all belt guides.
2. If the noise is continuous, adjust the clutch.

PROBLEM: The rear wheels spin over uneven terrain.
1. Check the front axle. If the front axle does not freely pivot, loosen the axle bolt(s).

PROBLEM: The engine stops when the operator leaves the seat.
1. This is normal. The operator presence system is designed to allow operation only if the operator is in the seat.

PROBLEM: The engine stops when selecting reverse travel.
1. Before selecting reverse travel, move the blade rotation control to the DISENGAGE position. See the Operation section for details.

PROBLEM: The transaxle is difficult to shift between gears with the engine running and the clutch depressed.
1. Check the clutch adjustment to make sure the belt stops when the clutch pedal is depressed with the transaxle in (N) neutral.
2. Check the belt guides around the transaxle drive pulley. Make sure the belt guides do not touch the pulley.
HOW TO ORDER REPAIR PARTS

Only use a factory repair part. Repair parts, except for the engine or the transmission, are available from the store where the unit was purchased, a service shop recommended by the store, or an authorized service shop found in the yellow pages of the telephone directory.

If you cannot get a repair part or service as described above, call or write to the Central Parts Distributor shown below. When you order, include the following information: (1) Complete Model Number (see nameplate), (2) Date of Manufacture, (3) Complete Part Number, (4) Description, (5) Quantity. Repair parts for the engine or the transmission are available from the manufacturer’s authorized service center found in the yellow pages of the telephone directory. See the individual engine or transmission warranties.

If you are unable to obtain parts or service in the manner outlined above, then contact:

SLOPE GUIDE

SIGHT AND HOLD THIS GUIDE LEVEL WITH A VERTICAL TREE, A CORNER OF A STRUCTURE, A POWER LINE POLE, OR A FENCE.

On a riding mower to determine if a slope is safe to mow: (1) disengage the blade(s), (2) put the unit in reverse, and (3) try to back straight up the slope. If you can back up the slope, it is generally safe to mow. However, if you do not feel safe, or if you are not completely sure, use this guide and do not mow a slope that is greater than 15 degrees. If the riding mower is used with a pull-behind or rear mounted attachment, do not operate the unit on a slope that is greater than 10 degrees.

A 15 degree slope is a hill that increases in height at approximately 2.5 feet in 10 feet.
A 10 degree slope is a hill that increases in height at approximately 1.7 feet in 10 feet.

Use extreme care at all times, and avoid sudden turns or maneuvers. Follow other instructions in this manual for safety in mowing on slopes. Operate a riding mower up or down slopes, never across the face of slopes. Operate a walk-behind mower across the face of slopes, never up or down slopes. Use extra care when operating on or near slopes and obstructions.
